EDUCATION

Master of Information Technology

University of New South Wales

June 2025
Sydney, Australia

Bachelor of Technology in Computer Engineering

NMIMS – Mukesh Patel School of Technology Management and Engineering

May 2022
Mumbai, India

EXPERIENCE

Software Engineering Intern

Mark Computers

Oct 2025 – Dec 2025
Mumbai, India

- Built an enterprise-grade **Fuel Retail Management System** using **ASP.NET Core**, **MS SQL Server**, **Bootstrap**, and **jQuery** to digitise operations across POS, accounting, HR, and inventory for **multi-station petrol pump networks**.
- Integrated **Multi-Product Dispenser (MPD)** hardware to capture **real-time fuel sales** and shift-wise meter readings, reducing manual log errors by **over 90%** and automating reconciliation across **20+ operational workflows**.

Software Engineering Intern

L&T Realty

May 2021 – Jul 2021
Mumbai, India

- Designed and deployed an **end-to-end AI application** that served real-time price predictions for **5,000+ property listings**, processing **1,000+ daily inference requests** via **FastAPI REST endpoints** and a **Streamlit** user interface.
- Productionized a **model serving pipeline** by containerizing services with **Docker**, validating inputs with **Pydantic**, and integrating **PostgreSQL**-backed feature queries, reducing manual analysis time by **73%**.

PROJECTS

Scalable Web AI Agent for Automated Content Generation [\[GitHub\]](#)

2025

- Architected an **event-driven AI agent system** using **Google Gemini** and **Inngest** to autonomously search the web, reason over results, and generate professional newsletters via multi-step agent workflows.
- Implemented scalable task orchestration and background execution patterns to support concurrent agent runs, aligning with production-ready **agentic AI system design** and asynchronous processing models.

Document Q&A System with LLMs and Vector Search [\[GitHub\]](#)

2025

- Built a **document-based Q&A system** enabling users to query uploaded PDFs using **Google Gemini** and **Pinecone vector database**, implementing chunking, embedding, and similarity search for context-aware retrieval (RAG).
- Developed an interactive **Streamlit** interface and end-to-end ingestion pipeline, indexing document chunks in **Pinecone** and generating grounded responses via LLM inference, mirroring production-grade **RAG architectures**.

CeleStE Conference Management System [\[GitHub\]](#)

2025

- Led a 6-member Agile team as **Product Owner** to deliver a scalable conference management system with a **React** web dashboard and **React Native mobile app** featuring session bookings, chat, Q&A, QR ticketing, and analytics.
- Architected backend using **Node.js** with microservices-inspired structure; deployed with **Docker** and integrated with **MongoDB**, **Redis**, **NATS**, and **JWT-based** authentication.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, TypeScript, SQL, Java
- **AI & LLM Engineering:** Large Language Models (LLMs), Google Gemini, OpenAI API, Ollama (Local LLM Inference), Prompt Engineering, RAG Architectures, Vector Search, Agentic AI Systems
- **LLM Frameworks & Tooling:** LangChain, Tool Calling, Prompt Templates, Retrieval Pipelines
- **Backend & APIs:** FastAPI, Node.js, Flask, Django, REST APIs, GraphQL, Async Services, JWT Authentication
- **Frontend & AI Interfaces:** React, Streamlit, HTML5, CSS3, Tailwind, Redux Toolkit
- **Databases & Vector Stores:** PostgreSQL, MySQL, MongoDB, Redis, Pinecone
- **Eventing & Automation:** Inngest, n8n, Webhooks, Event-Driven Workflows, API Orchestration
- **Cloud & DevOps:** Docker, CI/CD (basic), AWS (basic), Azure (basic), Environment Isolation
